

# TENNESSEE GRAZING SCHOOLS

## What we will cover in the workshop:

- Essential management practices that will allow pasture plants to survive and thrive while meeting the year-round needs of grazing animals.
- How to use fence placement, drinking water tanks, and animal movement to control animals and improve forage survival and use.
- How to determine the condition of a pasture?
- What it cost to make and feed hay; establish forages; use the manure and urine from animals' vs fertilizer
- What specific programs livestock farmers participate in and the management expectations if implemented.

**RSVP: See contact on spreadsheet to register and date and location.**
